

...WHAT YOU NEED TO KNOW

FAST FACTS ABOUT HEPATITIS A

HEPATITIS A is a contagious liver disease caused by the **HEPATITIS A** virus (HAV).

The disease causes inflammation (swelling) of the liver that can last up to a few months.

Almost everyone recovers from **HEPATITIS A** with lifelong immunity but a small amount of people may die due to liver failure.

HEPATITIS A can be prevented by getting the vaccine and washing your hands regularly for at least 20 seconds.

WHAT PUTS YOU AT RISK FOR HEPATITIS A
Hepatitis A is spread by swallowing food or liquids contaminated with infected feces (poop).

Most infections result from close personal contact with an infected household member or sex partner.

SYMPTOMS OF HEPATITIS A
