Purpose:

A. To serve as establish the treatment standard for treating patients with complaints of pain.

Authority:

- A. California Health and Safety Code, Division 2.5
- B. California Code of Regulations, Title 22, Division 9

Protocol:

Every patient deserves to have their pain managed. Not all painful conditions require advanced life support (ALS) intervention. Basic life support (BLS) pain management methods (reassurance, adjusting position of comfort, ice or heat, and gentle transport) can be considered before deciding to treat with narcotic medication.

Criteria to consider pain medication for pain control. (ALL criteria must be met):

- A. Discomfort/Pain of Suspected Cardiac Origin:
 - Moderate to Severe pain not relieved by oxygen (O₂) administration and three (3) doses of Nitroglycerin (NTG), or in patients who cannot take NTG because they are taking PDE-5 inhibitors.
 - 2. Systolic blood pressure > 90 mmHg.
 - 3. Respiratory rate > 6.
- B. Burns:
 - 1. Partial or full thickness burn(s) with moderate to severe pain and without evidence of shock or altered mental status.
 - 2. SBP > 90 mmHg
 - 3. RR > 6
- C. Trauma:
 - 1. Moderate to severe pain from amputations and/or suspected rib fractures, extremity fracture(s), including hip or shoulder injuries, or dislocations.
 - 2. No evidence of head injury and Glasgow Coma Scale (GSC) =15 or baseline
 - 3. SBP > 90 mm Hg
 - 4. RR > 6
- D. Other (i.e. non-traumatic abdominal pain, back pain, gallstones, pancreatitis, kidney stones, sickle cell crisis, cancer pain):
 - 1. Moderate to severe pain
 - 2. SBP > 90 mm Hg

3. RR > 6

NOTE: SBP of < 90 mmHg is not a contraindication for Ketamine. See NOTE under ALS for contraindications for Ketamine.

PL C
BLS
1. Assess and support ABC's and needed.
2. Supplemental O_2 as necessary to maintain $SpO_2 \ge 94\%$. Use the lowest concentration and flow rate of O_2 as pescible. Assess and treat, as appropriate, for underlying equals
flow rate of O ₂ as possible. Assess and treat, as appropriate, for underlying cause. 3. Transport
3. Transport ALS
1. Advanced Airway adjuncts as needed.
2. Cardiac and SpO_2 monitoring
3. Initiate vascular access.
 Document pain scale (sample scale attached below) with initial assessment/vital signs, after
each administration of medication, and after all procedures.
5. Pain medications shall be titrated to relief if pain not effectively managed with BLS pain
management methods. Only use one (1):
a. Fentanyl Citrate:
Cardiac: 1 mcg/kg slow IV/IO/IN push every 5 minutes. Max dose of 2
mcg/kg total.
 Burn: 1 mcg/kg slow IV/IO/IN push every 5 minutes. Max dose of 3 mcg/kg
total.
 Trauma: 1 mcg/kg slow IV/IO/IN push every 5 minutes. Max dose of 2
mcg/kg total.
 Other: 1 mcg/kg slow IV/IO/IN push every 5 minutes. Max dose of 2 mcg/kg
total.
b. Morphine Sulfate:
 Cardiac: 2mg slow IV/IO push every 5 minutes. Max dose of 0.2 mg/kg.
 Burns: ** 0.1mg/kg slow IV/IO push every 5 minutes. Max dose of 0.3 mg/kg
 Trauma: ** 0.1 mg/kg slow IV/IO push every 5 minutes. Max dose of 0.2
mg/kg.
 Other: 0.1 mg/kg slow IV/IO push every 5 minutes. Max dose of 0.2 mg/kg.
c. Ketamine (non-Opioid): Not to be used for cardiac pain. For all other pain
administration as follows:
 Mix 0.3 mg/kg Ketamine (max dose = 30mg) in 50-100cc normal saline
solution (NSS) or D5W and administer slow IV drip over ten (10) minutes.
 If pain remains at, or returns to, moderate or severe, you may administer a
second dose of 0.3 mg/kg Ketamine (max dose=30 mg) in 50-100cc NSS or
D5W and administer slow IV drip over ten (10) minutes.
NOTE: Do not administer opioids to patients with any of the following contraindications:
 Systolic BP < 90mmHG
 Hypoxia or respiratory rate < 6
 ALOC or evidence of traumatic brain injury.
Do not administer Ketamine to patients with any of the following contraindications:
Pregnancy
ALOC
 Multi-system trauma or active bleeding
 DO NOT ADMINISTER OPIOIDS AND KETAMINE TO THE SAME
PATIENT.

Examples of a 0-10 Pain Scale

	0	
	1 Very Mild	
Minor	2 Discomforting	
Able to adapt to pain	3 Tolerable	
Madarata	4 Distressing	
Moderate Interferes with many activities.	5 Very Distressing	
	6 Intense	
	7 Very Intense	
Severe	8 Utterly Horrible	
and unable to function independently.	9 Excruciating Unbearable	
	10 Unimaginable Unspeakable	-
