Purpose:

- A. To establish the treatment standard for patients assessed to have shortness of breath and/or respiratory distress.
- B. This protocol does not require the diagnosis of a specific disease or etiology precipitating respiratory distress. Treatment is assessment based.

Authority:

- A. California Health and Safety Code, Division 2.5
- B. California Code of Regulations, Title 22, Division 9

Caveats:

- A. Pulmonary edema in the setting of CHF will usually have corroborating signs such as:
 - 1. History of CHF and medications such as diuretics and/or angiotensin-converting enzyme (ACE) inhibitors.
 - 2. Peripheral edema.
 - 3. Jugular venous distension (JVD).
 - 4. Frothy pulmonary secretions.

Policy:

BLS
<ol style="list-style-type: none"> 1. Assess C-A-B. 2. Position of comfort, reduce anxiety. 3. SpO2 with supplemental O₂ as needed. 4. Suction as needed. 5. CPAP for severe dyspnea. 6. Airway adjuncts as needed.
ALS
<ol style="list-style-type: none"> 1. Cardiac monitoring and ETCO2 measurement as available. 2. Vascular access, but do not delay airway management. 3. Consider intubation for significant hypoxia, dyspnea, or impending airway loss.

NOTE: Ipratropium Bromide may be used as a substitute for Albuterol when Albuterol is not available.

Acute Respiratory Distress

- Assess ABC's limit physical exertion, reduce anxiety
- Consider oxygen therapy per Respiratory Distress: Airway management PD # 8020
- Cardiac Monitor and SpO₂, and ETCO₂ (continuous waveform) with advanced airways.
- Consider vascular access but do not delay airway management or treatment.
- Early contact with receiving hospital.
